

# The Japanese Garden Centre's "how to..

## *..set up an upright bamboo spout"*

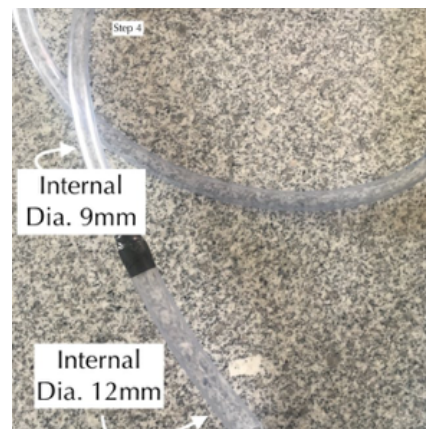

1. Unwrap the spout carefully, beware the end of the metal spike is sharp.

2. Loosen the two screws using a screwdriver, twist the metal spike so that it is facing downwards and place the screws back in the top and bottom holes.

3. The spike is pushed into the ground to provide the spout with stability.

4. Two different diameters of hose pipe are supplied. Please use the pipe that fits best with your pump nozzle.

### **Trouble Shooting:**

If you have any questions regarding setting up your bamboo spout feel free to call us or send us an email. Please note that bamboo naturally splits, however this should not affect the performance of the spout.
